

Environmental Policy

Optidev is one of the leading players in the Nordic region in delivering cost-effective solutions with a focus on transport, logistics and passenger traffic. We offer the entire value chain, in both hardware and software, as we develop, implement, and deliver robust mobility solutions for collecting business-critical information.

Optidev shall be a pioneer and driving force when it comes to environmental considerations in the industries in which we operate.

We will work to improve our environmental performance and prevent risks that can lead to negative environmental impact and to ensure that we always comply with current environmental legislation.

Our environmental impact is primarily in the areas of purchasing and delivery of products and services, where we will work actively to reduce our negative impact on the environment as far as is technically possible and economically feasible.

In the following areas, we at Optidev shall:

Experience, Knowledge and Information

- Secure our environmental expertise in the organization's various functions and ensure that this expertise is available.
- Ensure that we understand and introduce applicable legal requirements in the environmental area.

Supplier and contractor services

- Steer towards hiring suppliers who have introduced systematic environmental work (The Swedish Environmental Base [Svensk Miljöbas], ISO 14001 or equivalent) and only non-certified suppliers when there are no other alternatives.
- Where possible, influence suppliers to introduce systematic environmental work.

Purchasing and resource use

- Buy products and services that have the least environmental impact seen over their entire life cycle.
- Minimize the use of consumables.

Waste and hazardous waste

- Sort and ensure the disposal of all hazardous waste that arises in our operations and sort at source all other waste as far as is practically possible.

Handling of chemical products

- Have a safe handling and use of the chemical products we have in our operation.

Energy and water usage

- Continuously review our energy use and actively work to reduce our consumption.

Vehicles and travel

- As far as possible, make business trips with environmentally friendly alternatives to minimize climate impact.
- Steer towards distance meetings and remote work and introduce technology for such working methods.

Transporter

- Steer towards minimizing our transports and that the ones taking place have vehicles and types of energy with the best environmental performance.

This environmental policy was approved by Optidev AB on March 1, 2019

Fredrik Logenius, CEO
